

## Amendments to the Claims:

Please cancel claims 7 and 8 without prejudice.

1. (Currently Amended) An enbloc air conditioner comprising:
  - a condenser unit crossed by a flow of air external to the room to be conditioned A-between at least an inlet and at least an outlet;
  - an evaporator unit crossed by a flow of air internal to the room to be conditioned A-between at least an intake and at least a delivery way, wherein said condenser unit and said evaporator unit are arranged in a single container 13,
  - in said container a first part being defined ~~is defined wherein wherein~~ said evaporator unit is arranged and a second part in which said condenser unit is arranged, only said first part of said container in which said evaporator unit is arranged, projecting inside said room to be conditioned, said parts are aligned one behind the other according to an axis parallel to the direction of the inlet and the outlet of said external air flow through said at least one inlet and at least one outlet of said condenser unit, said inlet and said outlet being placed in a substantially horizontal plane and said inlet and outlet consisting of two holes, the perimetral external surface of said second part of said container being suited to be coupled to the surfaces of an opening made in a wall of said room to be conditioned, said evaporator unit being provided with an inclined air delivery opening pointing downwards.
2. (Currently Amended) The enbloc air conditioner according to claim 1 wherein said holes are substantially circular having a big diameter, ~~preferably not lower than~~ of 160 mm or more.
3. (Currently Amended) The enbloc air conditioner according to claim 1) wherein ~~said second part of said container in which said condenser unit is arranged, is built in in a wall of said room to be conditioned.~~ at least one intake of said evaporator unit comprise a first vertical intake and a second inclined intake pointing upwards.
4. (Currently Amended) The enbloc air conditioner according to claim 1 wherein ~~said container is arranged on the windowsill of a window and has said second part~~

projecting outside relative to the descent plane of the rolling shutter closing said window. condenser unit comprises at least a refrigerant compressor, at least a condenser bank and at least a fan arranged upstream said condenser bank.

5. (Currently Amended) The enbloc air conditioner (1) according to claim 1) characterized in that said ~~at least one intake of said evaporator unit comprise a first vertical intake and a second inclined intake pointing upwards.~~ wherein said evaporator unit comprises at least an evaporator bank and at least a fan arranged upstream said evaporator bank.

6. (Currently Amended) The ~~enbloc air conditioner according to claim 1)~~ wherein said evaporator unit is provided with an inclined air delivery opening pointing downwards. An air conditioner installation comprising:

- an enbloc air conditioner having:

a condenser unit crossed by a flow of air external to the room to be conditioned between at least an inlet and at least an outlet;

an evaporator unit crossed by a flow of air internal to the room to be conditioned between at least an intake and at least a delivery way,

said condenser unit and said evaporator unit being arranged in a single container, which defines a first part wherein said evaporator unit is arranged and a second part in which said condenser unit is arranged,

said parts being aligned one behind the other according to an axis parallel to the direction of the inlet and the outlet of said external air flow, through said at least one inlet and at least one outlet of said condenser unit,

said inlet and said outlet being placed in a substantially horizontal plane and said inlet and outlet consisting of two holes,

- a wall of said room to be conditioned facing the outside and having an opening suited to house said enbloc air conditioner,

wherein said opening of said wall is placed substantially in the top of said wall, said first part of said container projecting inside said room,

the perimetral external surface of said second part of said container being suited to be coupled with the surfaces of an opening made in a wall of said room and delivery openings of said delivery way being inclined downwards.

7. (Cancelled)

8. (Cancelled)
